## DETAILED ACTION

### *Specification*

1. The disclosure is objected to because of the following informalities: On page 1, the status of the parent application should be updated.

Appropriate correction is required.

### *Double Patenting*

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-14 and 20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No. 6,368,540 (issued from parent Application No. 09/383,862). Although the conflicting claims are not identical, they are not patentably distinct from each other because forming at least one bevel would have been obvious to one of ordinary skill in the art at the time

Art Unit: 1732

the invention was made principally because claims 1-14 of U.S. Patent 6,368,540 recite forming a bevel.

4. Claims 15-19 and 21 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No. 6,368,540 (issued from parent Application No. 09/383,862). Although the conflicting claims are not identical, they are not patentably distinct from each other because forming an opposing, adjacent pair of bevels would have been obvious to one of ordinary skill in the art at the time the invention was made principally because claims 1-14 of U.S. Patent 6,368,540 recite forming a bevel, and these claims also recite applying a compressive force to opposing parallel surfaces of the printed circuit board (resulting in the formation of opposing, adjacent pair of bevels).
